

Product Information

What is MoGo Mouse^{BT}?

MoGo Mouse^{BT} is a business-card sized, Bluetooth-enabled mouse that stores and recharges neatly inside...that's right, inside...your laptop computer's PC card slot when it's not being used. MoGo Mouse^{BT} is a technologically advanced wonder, featuring patent-pending optics and a system that automatically levers the mouse up into your hand as you work. With no batteries to replace, the MoGo Mouse^{BT} recharges in less than an hour in the PC card slot of your laptop.

Who's MoGo Mouse^{BT} meant for?

MoGo Mouse^{BT} is specifically designed for road warriors who hate carrying around full-sized, bulky mice, but who also despise laptop trackpads and trackpoints. MoGo Mouse^{BT} provides them with a solution to their problem, making it easier for them to work on the road.

What's so special about MoGo Mouse^{BT}?

Other mice, even those meant for road warriors, just don't cut it. Mini-mice (the "walnut shells") get lost in your hand and are difficult to maneuver, and the ideas of carrying a full-sized mouse defeats the entire purpose of mobility on the go, making MoGo Mouse^{BT} a natural.

USE IT.

STORE IT.
